

Almonds in California

Trial area:
California

Conducted by:
Caltec R&D Co

Crop and cultivar:
Almonds, 7-year-old, 124 trees/Acre

Variety:
Fritz and Nonpareil

Plot size:
Single tree

Application rate and timing:
3 x 3 pt/Ac @ pink bud, petal fall, early nut development in 100 gal/Ac

Design:
6x replicated randomised block

Introduction

Kelpak Liquid Seaweed Concentrate was tested on two almond varieties in California under a standard fertilizer and plant protection program for this region.

Results

Kelpak LSC treatments significantly increased in-hull and nut meat yields of both Nonpareil and Fritz varieties with significant increases in return on investment.
