

Onion in California

Trial area:

Escalon, California

Conducted by:

2 Bees Agricultural Research

Crop:

Onion

Variety:

Nikita

Plot size:

5 ft x 30 ft

Application rate and timing:

3 x 2 pt/Ac @ 3-leaf, +14 d, +14 d

2 x 3 pt @ 3-leaf, +21 d

Design:

6x replicated randomised block

Kelpak

Introduction

Kelpak Liquid Seaweed Concentrate was tested on Nikita onion in California under a standard fertilizer and plant protection program for this region.

Results

Kelpak LSC applied with two different timing programs significantly increased vigor ratings and total yield (+17%) of onions compared to the standard grower practice. No statistical differences were found between the two Kelpak LSC programs.
